

Cross Sums ★☆

By Nikoli Inc.
www.puzzle.jp/index.html

These puzzles come to us courtesy of Puzzle Japan (see the URL above). Each one is like a crossword puzzle, but with numbers. Your goal is to fill each white square with a single digit. The clue number for a horizontal group of digits is to the left of a group and above the slash, and for a vertical group of digits it is above the group and below the slash. This clue number represents the sum of the digits in its corresponding group. No zeros are used, and no digit may be repeated within a group. The example below shows a solved puzzle.
