

# SUDOMINOKU

By Raymond Young in *GAMES Magazine* July 2009

This puzzle combines two perennial favorites – Sudoku and dominoes. You are given a set of dominoes with numbers 1 through 9, excluding doubles. Your goal is to fit them into the grid so that every row, column, and heavily outlined subsection contains each digit from 1 to 9 exactly once. To start you off, we've shown the single numbers 1 through 9 in circles, and we've already placed several dominoes. Can you do the rest?
